
Model-Pivot

Release 0.1

Guangyao Chen

Dec 11, 2021

CONTENTS

1	Contents	3
1.1	Usage	3
1.2	IR Model	3
1.3	IR Operators	4
1.4	Examples	4

Model-Pivot is a model conversion and visualization tool to help users inter-operate among different deep learning frameworks. IR is based on the National Information Technology Standardization `Neural Network Representation and Model Compression Part 1: Convolution Neural Network.

Check out the *Usage* section for further information, including how to *Installation* the project.

Note: This project is under active development.

CHAPTER
ONE

CONTENTS

1.1 Usage

1.1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

1.1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

The `kind` parameter should be either "meat", "fish", or "veggies". Otherwise, `lumache.get_random_ingredients()` will raise an exception.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

1.2 IR Model

1.2.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

1.2.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

The `kind` parameter should be either "meat", "fish", or "veggies". Otherwise, `lumache.get_random_ingredients()` will raise an exception.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

1.3 IR Operators

1.3.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

1.3.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

The `kind` parameter should be either "meat", "fish", or "veggies". Otherwise, `lumache.get_random_ingredients()` will raise an exception.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

1.4 Examples

1.4.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

1.4.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

The `kind` parameter should be either "meat", "fish", or "veggies". Otherwise, `lumache.get_random_ingredients()` will raise an exception.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```
